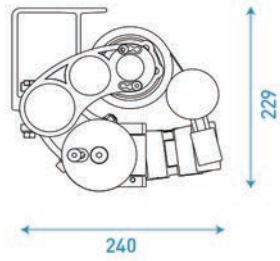
PIUMA PETITE PERFECTION

PIUMA is the new square bar awning proposal.

Developed with the collaboration of architect Mario Mazzer, PIUMA stands out for its clean and minimalist lines and for its unique extruded arm support, marked by a graceful and catchy shape. This model has been designed to answer the market growing needs of an awning with high quality and performance at a more accessible price.
Available up to 3,15 meters projection, PIUMA features the new arm FUSION, a lighter, square-shaped cable arm engineered for smaller awnings.
Fusion is equipped with DAT (Dynamic Arm Torsion) SYSTEM, that prevents fabric damage by holding it constantly taut, guaranteeing a longer durability of the fabric over time.

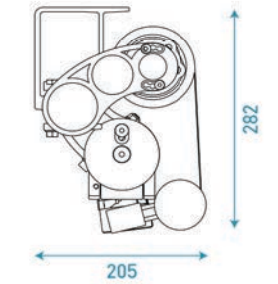
Awning sizes with folded arms

Wall or ceiling installation



0° minimum inclination

Wall or ceiling installation



90° minimum inclination
