ACMEDA

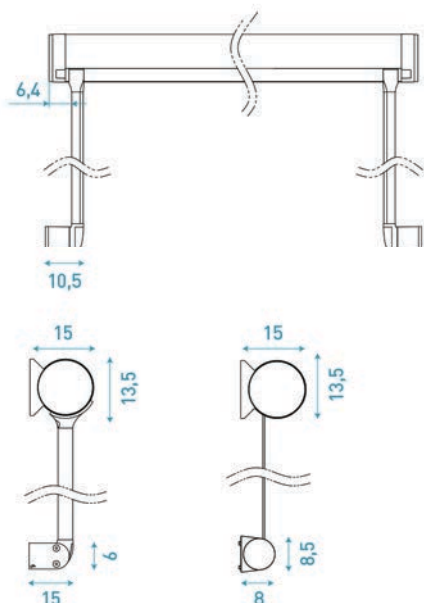

PRECISION IN MOTION

rolleaseacmeda.com

Winner of the 2012 Red dot design award, ILIOS is the premium proposal in the drop awning sector.

Elegant and plain, technologically innovative, with excellent performance and wide installation variants, it is the expression of our passionate work. ILIOS is available in 4 different versions to better suit private and commercial applications: with or without box, with steel cable guides or with tensioned arms. Our vocation for research and testing has enabled it to have a terminal bar that perfectly integrates inside the box, always enabling a hermetic closure. ILIOS can be installed on wall and ceiling and offers a great advantage: maintenance and change of fabric/motor can be carried out without uninstalling the awning. Thanks to the practical SMART-BOX system, the front cover can be removed fast and easily. There are no visible screws to maintain a plain and elegant design. The maximum size of the awning with acrylic fabric is 4.5 meters width with 3 meters height, while with screen or microperforated fabric it can reach a 4.5 meters height. ILIOS is certified by TÜV Rheinland according to European standard EN 13561 and has a 5 year guarantee. Its design is patented.
